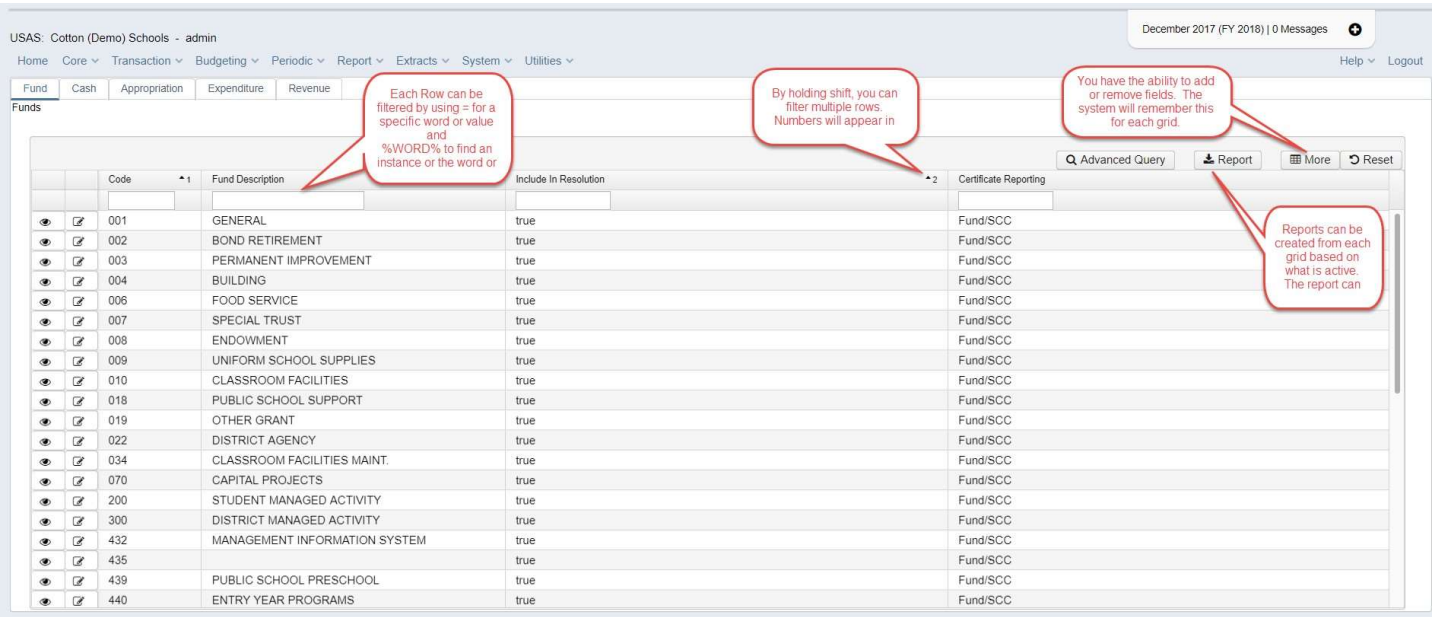
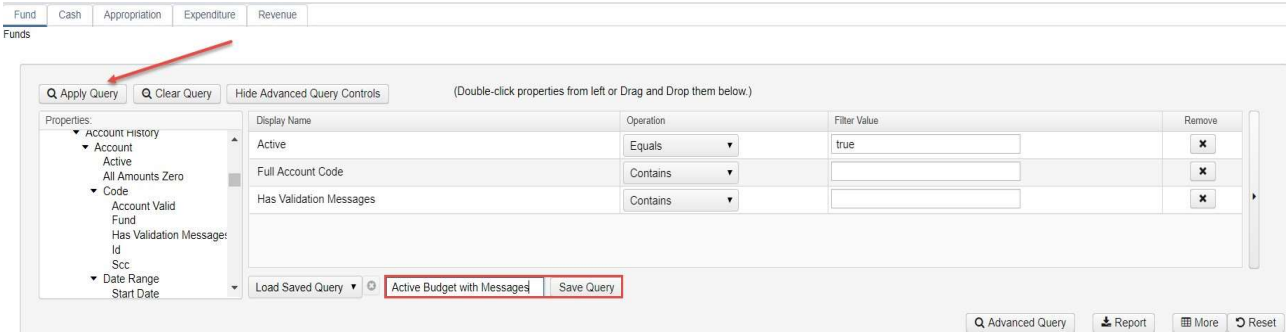
USXS-R Grids

Grids are almost in every screen in both USAS-R and USPS-R



1. Filtering of all rows can occur. See Filtering Shortcuts HERE.
2. By holding shift and selecting a row, multiple rows can filtered simultaneously.
3. To add or remove items from a grid select 'more' , items are saved per user.
    - Please Note: when data is refreshed from classic, these are reset. Once a user finds the grid settings he/she likes, it is suggested to take a screen shot to help rebuild these.
4. Most grids also have the ability to apply advanced queries that can be saved.



5. Reports can be generated from any grid in pdf, .csv, excel, and plain text format.
6. The reset button will reset the grid to the SSDT default. ***This cannot be undone.***
